

# Coperon Data Entry Services

---

## Why Coperon Technologies?

---

Lighting manufacturers today are faced with an overwhelming challenge in managing their product data. With limited resources, they are required to maintain complex databases with technical data, photographs, drawings and an array of related documents.

Using their databases, manufacturers must create updated web, CD-ROM and other electronic catalogs for their own use, plus provide their data to distributors and lighting calculation software providers, often in other data structures, formats and standards.

Coperon Technologies data entry services rely on an experienced team with a specific knowledge in the lighting and electrical industries. Hundred of thousands of references from different manufacturers, for different markets were entered to date building the right expertise at the level of each member of Coperon's Data Entry team.

**We understand your business and that makes us different!**

## Customized services to meet your needs

---

Coperon practical experience led us to adopt a flexible approach that meets the context and requirements of every single client. Whether data is provided as paper catalogs, or in any type of electronic document, Coperon Data Entry team can handle the data to re-enter it in the required data structure.

If you need to be in control of the data entry process, Coperon Data Entry team can even work directly on your systems to enrich and complete the data. You will be able to monitor our work, measure progress and validate immediately the work achieved.

By end, each data entry project is different and that makes your project unique.
